

Tinnitus important history questions and interpretation.

For use by Physicians, GPs and Clinicians.

Questions to patient	Interpretation and suggested actions
<p>What do you believe caused the tinnitus?</p> <p>Did it begin suddenly or develop gradually?</p>	<p>Sudden onset might be due a single event (e.g. a loud noise or traumatic injury).</p> <p>Gradual onset of tinnitus with progressive hearing loss suggests presbycusis or prolonged noise exposure.</p> <p>Patients work history, age and health are important considerations.</p>
<p>Is a hearing loss present?</p> <p>Is the tinnitus heard in one or both ears, does it fill the head?</p>	<p>Unilateral tinnitus with a conductive hearing loss can be caused by impacted cerumen, otitis media or other middle ear pathology.</p> <p>Tinnitus associated with unilateral sensorineural hearing loss is a red flag for vestibular schwannoma and requires further diagnostic testing.</p>
<p>Is the tinnitus continuous?</p> <p>What does it sound like?</p>	<p>Pulsatile tinnitus suggests a vascular origin and should have an evaluation by a physician.</p>
<p>What medications are being used?</p> <p>Do you have any ongoing medical problems?</p>	<p>Check for ototoxicity, can the medical problems be better managed?</p> <p>Work with the patient's physician to ascertain if withdrawal of drugs that may be causing or aggravating tinnitus is possible.</p>
<p>Does the tinnitus change with neck movement or oral-facial movements?</p>	<p>Somatosensory modulation of tinnitus is common. If related to a physical problem, referral to a physiotherapist should be considered.</p>
<p>Do you have a sore or clicking jaw, or facial pain?</p>	<p>Indicates the need for an evaluation of the Temporomandibular Joint (TMJ) by an orthodontist or otologist.</p>
<p>Are there any things that make the tinnitus better or worse?</p>	<p>Stress frequently exacerbates tinnitus as well as intense noise exposure. Stress management and appropriate hearing protection may be necessary.</p>
